Education

University of Southern California

May 2026 (Expected)

- Bachelor of Science in Computer Science Games
- Relevant Coursework: Computer Graphics, Algorithms and Theory of Computing, Game Engines, Data Structures

GPA: 3.97

California State Polytechnic University, Pomona

August 2022 – December 2023

- Bachelor of Science in Computer Science

GPA: 4.0

Skills

- Engines: Unity, UE5, Godot
- Unity Plugins: Mirror, Opsive Behavior Designer, SECTR World Streaming, Dissonance Voice Chat, LlamaChat, Microsplat Terrain/Trax, PixelCrushersDialogue, OdinInspector, NaughtyAttributes, Probuilder
- Developer Tools: Visual Studio, Rider, Git, Perforce, Jenkins, Jira, OpenGL
- Languages: C++, C#, Java, Python, Ruby

Professional Experience

Game Programming Intern

June 2025 – August 2025

Airstrafe Interactive

Torrance, California

- Developed a fully modular NPC conversation generation system in Unity, enhancing game immersion and NPC liveliness
- Collaborated with designers to create custom visualization tools for 2000+ spawners, NPC patrol routes, and loading zones
- Reduced gameplay stuttering by reworking terrain loading and camera system to reduce artifacts and lag
- Wrote fully networked gameplay systems including a survival multiplayer sleep system and voice communication features
- Addressed player-reported issues and resolved bugs, enhancing gameplay quality and responsiveness

Software/IT Intern

June 2023 – August 2023

Nuvera Homes

Pleasanton, California

- Developed and documented Python script to compare financial statement tables in various formats
- Refactored and enhanced the readability of existing code by streamlining logic and modularizing functions
- Mastered a financial statement generation software and trained colleagues on its use

Projects

Stitchlings - USC Advanced Game Project (AGP) | Unity, C#, Perforce, Probuilder

June 2025 – Present

- Designed and prototyped levels, enemies, and weapons, defining core gameplay systems and player interactions
- Created a player buff system to manage in-game stat enhancements and balance
- Developed an internal tool to streamline enemy placement, improving level design efficiency
- Collaborated with team members to document designs and plan future game feature implementations

Smoke Break - USC Advanced Game Project (AGP) | Unity, C#, Perforce

June 2024 – May 2025

- Project was awarded SAGE: Student Game of the Year and 1st in Design, CGC: 1st in Interactive and 2nd in Cinematic
- Designed and conducted weekly playtests for bugs and issues, identifying 70+ usability issues and 80+ bugs
- Worked with a team of 40+ to track and address these issues, including ones regarding player comprehension and difficulty
- Programmed gameplay items to improve game usability, such as enemy vision cones and dynamic animation splines
- Proactively identified and fixed bugs, improving stability, performance, and overall player experience

Plutonian Vengeance | Unity, C#, Git

September 2024 – May 2025

- Developed all gameplay systems, including editable enemy attack sequencing, damage and health, cross-platform input support, sound management, and others
- Led sprint planning and goal assessment to optimize team productivity to ensure a quality game experience
- Produced game trailer showcasing key features and gameplay highlights

Cal Poly Pomona Game Development Club Projects | Godot, p5js, Git

August 2022 – May 2023

- Programmed gameplay mechanics such as swinging vines, rail networks, Undertale-style battle minigames
- Planned meetings, delegated tasks, and tracked progress to meet intended goals by the end of the semester
